

HELLENIC REPUBLIC

HELLENIC STATISTICAL AUTHORITY

Piraeus, 22 July 2011

## PRESS RELEASE

### Publication of provisional results of the 2011 Population Census

The Hellenic Statistical Authority (ELSTAT) conducted the 2011 Population and Housing Census during the period from 10 to 24 May 2011. With this press release, it is announcing the provisional results of the Resident Population <sup>(1)</sup> of the Country.

Across the country 10,787,690 residents were enumerated, of whom 5,303,690 men (49.2%) and 5,484,000 women (50.8%). Provisional results by municipality (“Kallikratis”) are included in the attached Table 1.

These provisional data are derived from preliminary lists, showing the number of people enumerated in each of the 94 Census Divisions in which the Country was divided, rather than from the processing of individual Census questionnaires, which is to follow in the period ahead. For this reason the data are classified as provisional and may differ from the final.

The final results regarding the Resident Population, at the level of settlement, will be available the second semester of 2012. Detailed results for the demographic, economic, and social characteristics of the population will become available in stages, starting at the end of 2012 and continuing in 2013, after the processing of the individual questionnaires (38,000,000 pages), which will include optical reading, coding and all kinds of quality checks.

To assess the completeness and quality of information collected by the Census, this time ELSTAT conducted a Census Post-Enumeration Survey. A large and representative sample of 20,000 households from across the country was used, with a view to assessing the Census data, including at low administrative level (“Kallikratis” municipality). Comparing the results of the Post-Enumeration Survey with those of the Census will take place in 2012, after the processing of the questionnaires of the two statistical works.

In compliance with Regulation 763/2008 of the European Parliament and the Council, the 2011 Census focused on the recording of the Resident Population of the country in contrast to previous Censuses, which were designed to record the *de facto* population (i.e. individuals who were present at the site of the enumeration). More generally, the methodology of the 2011 Census differs significantly in several respects from that of

---

<sup>(1)</sup> Individuals who lived continuously at the place of their usual residence for a period of at least 12 months before the reference date of the Census, or arrived at the place of their usual residence during the previous 12 months from the reference date of the Census, with the intention to remain there for at least one year

previous Censuses, such as the duration of the Census, the enumeration of individuals at their place of usual residence, etc. Thus, the results of the 2011 Census and those of earlier Censuses are not fully comparable.

From the provisional data arises that the municipalities of Kallithea (21.067,6), Nea Smyrni (20.740,6), Athens (16.830,4), Thessaloniki (16.703,3) and Nea Ionia (15.109,7) comprise the top five municipalities with the highest Resident Population density (per km<sup>2</sup>). The top five municipalities with the lowest Resident Population density (per km<sup>2</sup>) are Prespes (3,05), Zagori (3,78), Paranesti (3,85), Sfakia (4,11) and Nestorio (4,27) (Table 1).

Furthermore, provided in this Press Release are the following: a chart showing the distribution of the Resident Population by administrative region; tables indicating the percentages of males and females by administrative region (Table 2); and tables showing the top ten municipalities according to the highest percentage of female (Table 3) and male (Table 4) Resident Populations, respectively.

ELSTAT is grateful to the residents of the Country as well as all national and local agencies that contributed in various ways to the successful conduct and completion of the 2011 Population and Housing Census.
